

PHASE 1: DEFINE AGENT ROLE & ARCHITECTURE (SMART WASHING MACHINE USE CASE)

Define mission profile, hardware platform, sensors, and Mamdani Fuzzy Inference System (FIS)

PHASE 2: INTEGRATE LLM REASONING LAYER & TOOL ACCESS (OVERRIDING LAYER)

Allow the agent to access external information (APIs) and reason about whether the current fuzzy rules / parameters need to be adjusted before sending them to the Fuzzy Processing Layer.

PHASE 3: EMBED AGENT MEMORY & REFLECTION (LEARN FROM EXPERIENCE)

Store past experiences from hardware execution, learn from failures, and continuously improve decisions and fuzzy rules.
